

Land Development Design Surveyor

Are you looking to advance, enhance and/or kick-start your career? Are you willing to leave the current day to day grind behind and to start enjoying the benefits, variety and scope from joining our long established and busy Hamilton Office?

Come join a forward thinking and supportive team of surveyors, planners and architects where a healthy work environment and workplace wellbeing is provided and encouraged.

Formerly known as McPherson Goodwin Surveyors, MG Solutions comprises a full in-house team of surveying, planning and architectural consultants, offering land development and civil works project management as one of our many services. We want someone to continue and potentially add to the high standard provided, with a particular focus on Civil Design, Project Management and Quality Assurance. If you are a Licensed Cadastral Surveyor or Registered Professional Surveyor, we can also ensure, and encourage, that you have sufficient Cadastral and CPD exposure to keep your qualification current.

It is essential that applicants have excellent communication skills and are well organised in their day to day work environment. We have some of the latest Leica GPS/GNSS and robotic instruments and experience with these would be to your advantage but not mandatory. A high level of efficiency in using 12D would also be preferred.

A full 'clean' NZ driver's licence is required.

If you desire we can accommodate an immediate start, however we would ideally have you on board by mid-August.

A competitive remuneration package will be offered to the right applicant and applications will be treated with strict confidence.

Please email your covering letter and CV to:
