

Land Development Engineer / Designer / Surveyor / Technician

Staig & Smith Ltd is a long established multi-discipline firm carrying out a wide range of urban and rural land development projects in Nelson, Christchurch and the top of the South Island.

We are seeking a Land Development Engineer / Surveyor / Technician. A knowledge of subdivision and land development engineering design is essential. Applicants would require experience in water, wastewater and stormwater reticulation design along with roading and earthworks design. Experience in 12d and design software would be an advantage.

Ideally applicants should be skilled in dealing with contractors, clients and local authority officers. Attributes will include a high level of technical knowledge and the ability to work with other team members to achieve our client's objectives.

This is a position which will suit a designer/technician who works well in a collaborative environment and enjoys the challenges of designing civil engineering and land development projects. Ideally the successful applicant would hold a Surveying or Civil Engineering qualification or be an experienced technician and be familiar with designing works within local authority engineering standards.

The position is based in our Nelson office working as part of a friendly and supportive team of surveying, engineering and planning staff. We operate on a project team basis with inputs from all team members valued as part of arriving at the best outcome for our clients and professional fulfilment for the team.

Nelson is a thriving province close to beaches, skifields, lakes and wineries. Visit www.tourism.net/region/nelson to see what living and working in Nelson could offer you.

Project Manager – Subdivision & Land Development Engineering

We are seeking a Project Manager with a knowledge of subdivision and land development engineering.

Although project management of major construction projects forms the core role there is opportunity for the successful applicant to pursue other areas of professional interest or business growth outside subdivision and land development. Project Managers proficient in land development engineering design are encouraged to apply as the opportunity for a dual project management / design role is available.

Applicants should be skilled in dealing with contractors, clients and local authority officers. Attributes will include a high level of technical knowledge and the ability to work with other project team members to achieve our client's objectives.

This is a challenging position which will suit a highly motivated individual ambitious to further their professional development. Ideally the successful applicant will be RPSurv or CPEng qualified however applications will be considered from applicants showing a proven track record of project management skills.
